BOT CONSULTING

POST-EVENT EXECUTIVE REPORT

Odyssey Partner Summit '26

23 - 25 October 2026

Ananta Spa & Resorts, Jaipur

THE IDEAS TRAVELLED. THE PEOPLE MADE IT MATTER.

EXECUTIVE SUMMARY

One summit. A lasting signal.

Odyssey brought together BOT Consulting's partners, teams and guests in Jaipur for three days of ideas, recognition and practical conversation. Across technology, Global Capability Centers and leadership, the summit returned to one recurring question: how do we apply new capability without losing human judgement?

PEOPLE	GUEST SPEAKERS	GCC TEAMS
350+	16	8

DATA AND AI SESSIONS	YEARLY R&R	SRI VOLUNTEER ACTIVITY
4	12	90 min

What the conversations made clear

- AI becomes durable when it works inside governed systems, not beside them.
- GCC value is built through integration, ownership and a consulting mindset.
- Leadership remains a practice of judgment, connection and decisive action.

Turning AI into operating capability

Four sessions moved the conversation from potential to the systems that make it dependable.

TECHNOLOGY AND AI

How AI Learned to Use Your Tools

MCP and specialised agents can connect AI to enterprise tools with clearer boundaries, shared context and approval for consequential actions.

TECHNOLOGY AND AI

AI-Driven SDLC

Autonomous workflows can accelerate delivery when design and post-test gates keep accountability with experienced engineers.

TECHNOLOGY AND AI

Headless 360

Salesforce can act as a governed, context-rich backend for people and AI systems working through the interfaces that fit the work.

TECHNOLOGY AND AI

Production-Grade AgentCore

Live telemetry, limited tools and policy guardrails make multi-agent operations safer and more useful during production incidents.

THE WORK IS HUMAN. THE SYSTEMS SHOULD HELP.

SESSION HIGHLIGHTS / 02

Building GCCs with intent

Partner and BOT perspectives placed integration and real business value ahead of novelty.

GCC AND BUSINESS

GCC Panel: AllCloud and Cloudsmith

High-performing GCCs combine deep capability with customer proximity, learning culture and shared leadership across geographies.

GCC AND BUSINESS

What Odyssey Is

BOT's operating system connects people, processes and platforms, using AI for heavy lifting while keeping final judgment close to the work.

GCC AND BUSINESS

Pilot to P&L

A promising pilot becomes durable only when total cost, data readiness, adoption and a clear business case are addressed together.

THE OPERATING QUESTION

Does this release capacity to create measurable value?

The strongest conversations at Odyssey treated AI as a business and operating-model decision, not a layer of language added to an existing process.

Leadership, in the conversations that matter

The main stage made room for context: the personal stories and hard choices behind leadership practice.

LEADERSHIP

Same Seat, Different Lengths

Five CEOs reflected on hiring, capital, culture and AI, showing that good judgement depends on the stage of the business as much as a leader's conviction.

LEADERSHIP

The Untold Chapters

Pivotal choices, mentors and difficult people decisions reminded the room that a meaningful career is rarely a straight line.

LEADERSHIP

The C-Brows Journey

A reflection on endurance and connection reframed support systems as practical infrastructure for the long term.

Connection is not soft. It is how good work holds.

THE MOMENTS THAT MADE IT MATTER

People, purpose and a shared table

The summit's real record is not only the agenda. It is the people exchanging perspectives, taking the stage, celebrating each other and giving time to the Sri volunteer activity.

350+ people.
One shared story.

WHAT WE CARRY FORWARD

From conversations to next steps

The work after a summit is to turn the strongest signals into everyday practice.

01

Build for governed action

Design AI systems that can explain their evidence, respect policy boundaries and keep people responsible for consequential decisions.

02

Measure value beyond the pilot

Treat cost, data readiness, adoption and margin or growth impact as part of the same business case.

03

Make the GCC a connected venture

Invest in a culture where technical capability, consulting instincts and shared ownership reinforce one another.

04

Keep connection in the system

Use leadership conversations and support networks to make sustained performance more human and more resilient.

BOT CONSULTING

ODYSSEY 2026

The ideas travelled. The people made it matter.

Thank you to our partners, speakers, teams and guests for making Odyssey, Partner Summit '26 a generous, grounded and forward-looking gathering.
